## REAL WOOD VENEERS

---

Real Wood Veneers Wallcovering® comprises natural or recon wood veneer sliced 300% thinner than traditional veneer that is then laminated and balanced on a Technoform® metal foil substrate. The veneer is then pre-finished with 2 coats water based DuraFinish. The result is an extremely durable, flexible, Class 'A' Fire Rated, pre-finished wood wallcovering.

Real Wood Veneers Wallcovering® can be installed directly to primed drywall like regular vinyl wallcovering, using clay based adhesive. Since the product is pre-finished, the install time is quick and the space can be available for use in a matter of a few days. There are over 100 species to select from, (most available from inventory), with fast turn around on customs such as dye's, stains and lustre. Real Wood Veneers Wallcovering is supplied book matched as standard in 3' x 10' sheets. Custom sheet sizes are available.

## REAL WOOD VENEERS

---

### **Fire Ratings:**

ASTM: E84  
Flamespread: 10  
Smoke Developed: 25

### **Finish**

Standard Finish: Low Lustre  
30 Finish: 30% Lustre  
60 Finish: 60% Lustre

### **Size:**

3' x 10' and 3' x 9' standard sheets.  
Custom sizes available.

### **Custom Capabilities:**

Custom Stains, Custom Sheet Sizes, Cross Graining, Custom Matching

### **Matching:**

Book Match, Plank Match, End Match, Slip Match, Swing Match, Blueprint Match

## REAL WOOD VENEERS WOOD SPECIES

---

Select from our standard range of Real Wood Veneers or choose a custom specie, color or match.

Real Wood Veneers is the number one choice among designers, architects, and building owners looking for an attractive, high-quality wood interior. Real Wood Veneers Wallcovering provides substantial cost savings over traditional millwork. Delivering the beautiful look and feel of natural wood, Real Wood Veneers is the perfect solution for all wood surface projects.

Made with the highest grade of wood veneer, Real Wood Veneers slicing processes provides the greatest yields compared to other wood options, reducing the amount of wood required for an interior and increasing the scope of work produced from a single flitch. Most species of trees are harvested from plantations that are carefully managed to ensure the forest's health.
